nba_py Documentation

Release 0.1a2

nba_py

Jun 28, 2017

Contents

1	nba_py package	3
2	nba_py.player module	5
3	nba_py.game module	25
4	nba_py.team module	27
5	nba_py.constants module	35
6	Indices and tables	45
Py	Python Module Index	

Contents:

CHAPTER 1

nba_py package

```
class nba_py.Scoreboard (month=6, day=28, year=2017, league_id='00', offset=0)
A scoreboard for all games for a given day Displays current games plus info for a given day
```

Args:

```
month Specified month (1-12)
day Specified day (1-31)
year Specified year (YYYY)
league_id ID for the league to look in (Default is 00)
offset Day offset from which to operate
```

Attributes:

json Contains the full json dump to play around with

available()

```
east_conf_standings_by_day()
```

```
game_header()
```

```
last_meeting()
```

```
line_score()
```

```
series_standings()
```

```
west_conf_standings_by_day()
```

CHAPTER 2

nba_py.player module

```
class nba_py.player.PlayerCareer (player_id, per_mode='PerGame', league_id='00')
```

Contains stats based on several parameters such as career regular season totals, post season career totals, all star season careers totals, college season career totals, etc.

Args:

```
player_id Player ID to look up
```

per_mode Mode to measure statistics (Totals, PerGame, Per36, etc.)

league_id ID for the league to look in (Default is 00)

Attributes:

json Contains the full json dump to play around with

```
all_star_season_totals()
```

```
career_all_star_season_totals()
```

```
college_season_career_totals()
```

```
college_season_totals()
```

```
post_season_career_totals()
```

```
post_season_rankings()
```

```
post_season_totals()
```

```
preseason_career_totals()
```

```
preseason_season_totals()
```

regular_season_career_totals()

regular_season_rankings()

regular_season_totals()

```
Bases: nba_py.player._PlayerDashboard
```

Contains a lot of methods for last n minutes with a deficit of x points

Args:

player id ID of the player to look up team id ID of the team to look up measure_type Specifies type of measure to use (Base, Advanced, etc.) per_mode Mode to measure statistics (Totals, PerGame, Per36, etc.) **plus minus** Whether or not to consider plus minus (Y or N) pace adjust Whether or not to pace adjust stats (Y or N) rank Whether or not to consider rank (Y or N) **league_id** ID for the league to look in (Default is 00) season Season given to look up **season_type** Season type to consider (Regular / Playoffs) po_round Playoff round outcome Filter out by wins or losses location Filter out by home or away month Specify month to filter by season_segment Filter by pre/post all star break date_from Filter out games before a specific date **date to** Filter out games after a specific date opponent_team_id Opponent team ID to look up vs_conference Filter by conference vs_division Filter by division game_segment Filter by half / overtime **period** Filter by quarter / specific overtime shot_clock_range Filter statistics by range in shot clock last n games Filter by number of games specified in N

Attributes:

json Contains the full json dump to play around with

last10sec_deficit_3point()

Results in last 5 minutes <= 5 points

last1min_deficit_5point()
 Results in last 5 minutes <= 5 points</pre>

last1min_plusminus_5point()
Last 1 minutes +/= 5 points

last30sec_deficit_3point()
 Results in last 5 minutes <= 5 points</pre>

last30sec_plusminus_5point()
Last 30 seconds +/= 3 points

last3min_deficit_5point()
 Results in last 5 minutes <= 5 points</pre>

last3min_plusminus_5point()
Last 3 minutes +/= 5 points

last5min_deficit_5point()
 Results in last 5 minutes <= 5 points</pre>

last5min_plusminus_5point()
Last 5 minutes +/= 5 points

class nba_py.player.PlayerDefenseTracking (player_id, team_id=0, measure_type='Base', per_mode='PerGame', plus minus='N', $pace_adjust='N'$, rank='N', league_id='00', season='2016-17', season type='Regular Season', po_round='0', outcome='', 10cation='', month='0', season segment='', date_from='', date_to='', oppo*nent_team_id='0'*, vs_conference=' vs_division='', game_segment='', period='0', shot_clock_range='', last_n_games='0')

Bases: nba_py.player._PlayerDashboard

Tracking data for defense for a given player

Args:

player_id ID of the player to look up

team_id ID of the team to look up

measure_type Specifies type of measure to use (Base, Advanced, etc.)

per_mode Mode to measure statistics (Totals, PerGame, Per36, etc.)

plus_minus Whether or not to consider plus minus (Y or N)

pace_adjust Whether or not to pace adjust stats (Y or N)

rank Whether or not to consider rank (Y or N)

league_id ID for the league to look in (Default is 00)

season Season given to look up

season_type Season type to consider (Regular / Playoffs)

po_round Playoff round

outcome Filter out by wins or losses

location Filter out by home or away

month Specify month to filter by
season_segment Filter by pre/post all star break
date_from Filter out games before a specific date
date_to Filter out games after a specific date
opponent_team_id Opponent team ID to look up
vs_conference Filter by conference
vs_division Filter by division
game_segment Filter by half / overtime
period Filter by quarter / specific overtime
shot_clock_range Filter statistics by range in shot clock
last_n_games Filter by number of games specified in N

Attributes:

json Contains the full json dump to play around with

class nba_py.player.PlayerGameLogs (player_id, league_id='00', season='2016-17', sea-

son_type='Regular Season') Contains a full log of all the games for a player for a given season

Args:

player_id ID of the player to look up
league_id ID for the league to look in (Default is 00)
season Season given to look up
season_type Season type to consider (Regular / Playoffs)

Attributes:

json Contains the full json dump to play around with

info()

Bases: nba_py.player._PlayerDashboard

Contains stats pertaining to location, wins and losses, pre/post all star break, starting position, and numbers of days rest

Args:

player_id ID of the player to look up
team_id ID of the team to look up
measure_type Specifies type of measure to use (Base, Advanced, etc.)

per mode Mode to measure statistics (Totals, PerGame, Per36, etc.) **plus_minus** Whether or not to consider plus minus (Y or N) pace_adjust Whether or not to pace adjust stats (Y or N) rank Whether or not to consider rank (Y or N) league id ID for the league to look in (Default is 00) season Season given to look up season_type Season type to consider (Regular / Playoffs) po_round Playoff round outcome Filter out by wins or losses **location** Filter out by home or away month Specify month to filter by season_segment Filter by pre/post all star break date_from Filter out games before a specific date date_to Filter out games after a specific date opponent_team_id Opponent team ID to look up vs conference Filter by conference vs_division Filter by division game_segment Filter by half / overtime period Filter by quarter / specific overtime shot_clock_range Filter statistics by range in shot clock last_n_games Filter by number of games specified in N

Attributes:

json Contains the full json dump to play around with

```
days_rest()
location()
```

month()

```
pre_post_all_star()
```

```
starting_position()
```

```
win_losses()
```

Contains player stats by half, by quarter, by score margin, and by actual margins.

Args:

player_id ID of the player to look up team_id ID of the team to look up measure type Specifies type of measure to use (Base, Advanced, etc.) per_mode Mode to measure statistics (Totals, PerGame, Per36, etc.) plus_minus Whether or not to consider plus minus (Y or N) pace_adjust Whether or not to pace adjust stats (Y or N) rank Whether or not to consider rank (Y or N) **league_id** ID for the league to look in (Default is 00) season Season given to look up **season_type** Season type to consider (Regular / Playoffs) po_round Playoff round outcome Filter out by wins or losses location Filter out by home or away **month** Specify month to filter by **season_segment** Filter by pre/post all star break date_from Filter out games before a specific date date_to Filter out games after a specific date opponent_team_id Opponent team ID to look up vs_conference Filter by conference vs_division Filter by division game_segment Filter by half / overtime period Filter by quarter / specific overtime shot clock range Filter statistics by range in shot clock last_n_games Filter by number of games specified in N

Attributes:

json Contains the full json dump to play around with

```
by_actual_margin()
```

by_half()

by_period()

by_score_margin()

```
class nba_py.player.PlayerLastNGamesSplits (player_id, team_id=0, measure_type='Base',
                                                   per_mode='PerGame',
                                                                              plus_minus='N',
                                                   pace adjust='N', rank='N', league id='00',
                                                   season='2016-17',
                                                                         season_type='Regular
                                                   Season', po_round='0',
                                                                            outcome='',
                                                                                          lo-
                                                   cation='',
                                                             month='0',
                                                                           season_segment='',
                                                   date_from='`.
                                                                  date to='',
                                                                                        oppo-
                                                                              vs_conference='',
                                                   nent team id=0',
                                                   vs_division='', game_segment='', period='0',
                                                   shot_clock_range=``, last_n_games=`0`)
```

Bases: nba_py.player._PlayerDashboard

Contains players stats per last 5, 10, 15, and 20 games, or specified number of games.

Args:

player_id ID of the player to look up team id ID of the team to look up measure_type Specifies type of measure to use (Base, Advanced, etc.) per mode Mode to measure statistics (Totals, PerGame, Per36, etc.) **plus minus** Whether or not to consider plus minus (Y or N) **pace_adjust** Whether or not to pace adjust stats (Y or N) rank Whether or not to consider rank (Y or N) **league_id** ID for the league to look in (Default is 00) season Season given to look up season_type Season type to consider (Regular / Playoffs) po_round Playoff round outcome Filter out by wins or losses **location** Filter out by home or away **month** Specify month to filter by season_segment Filter by pre/post all star break date from Filter out games before a specific date date_to Filter out games after a specific date opponent_team_id Opponent team ID to look up vs_conference Filter by conference vs_division Filter by division game_segment Filter by half / overtime **period** Filter by quarter / specific overtime shot_clock_range Filter statistics by range in shot clock last n games Filter by number of games specified in N

Attributes:

json Contains the full json dump to play around with

gamenumber()

last10()
last15()
last20()

last5()

class nba_py.player.PlayerList (league_id='00', season='2016-17', only_current=1)

```
Contains a list of all players for a season, if specified, and will only contain current players if specified as well
```

Args:

league_id ID for the league to look in (Default is 00)

season Season given to look up

only_current Restrict lookup to only current players

Attributes:

json Contains the full json dump to play around with

info()

```
exception nba_py.player.PlayerNotFoundException
```

 $Bases: \verb+exceptions.Exception+$

class nba_py.player. PlayerOpponentSplits (<i>player_id</i> , <i>team_id=0</i> , <i>measure_type='Base'</i> ,
per_mode='PerGame', plus_minus='N',
pace_adjust='N', rank='N', league_id='00',
season='2016-17', season_type='Regular Season',
po_round='0', outcome='', location='', month='0',
season_segment='', date_from='', date_to='',
opponent_team_id='0', vs_conference='',
vs_division='', game_segment='', period='0',
shot_clock_range='', last_n_games='0')

Bases: nba_py.player._PlayerDashboard

Contains stats pertaining to player stats vs certain opponents by division, conference, and by specific team opponent

. .

. . .

Args:

player_id ID of the player to look up
team_id ID of the team to look up
measure_type Specifies type of measure to use (Base, Advanced, etc.)
per_mode Mode to measure statistics (Totals, PerGame, Per36, etc.)
plus_minus Whether or not to consider plus minus (Y or N)
pace_adjust Whether or not to pace adjust stats (Y or N)
rank Whether or not to consider rank (Y or N)
league_id ID for the league to look in (Default is 00)
season Season given to look up
season_type Season type to consider (Regular / Playoffs)
po_round Playoff round
outcome Filter out by wins or losses

location Filter out by home or away
month Specify month to filter by
season_segment Filter by pre/post all star break
date_from Filter out games before a specific date
date_to Filter out games after a specific date
opponent_team_id Opponent team ID to look up
vs_conference Filter by conference
vs_division Filter by division
game_segment Filter by half / overtime
period Filter by quarter / specific overtime
shot_clock_range Filter statistics by range in shot clock
last_n_games Filter by number of games specified in N

Attributes:

json Contains the full json dump to play around with

by_conference()

by_division()

by_opponent()

class nba_py.player.PlayerPassTracking (player_id, team_id=0, measure_type='Base', per_mode='PerGame', plus_minus='N', pace_adjust='N', rank='N', league_id='00', season='2016-17', season_type='Regular Season', po_round='0', outcome='', location='', month='0', season_segment='', date_from='', date_to='', opponent_team_id='0', vs_conference='', vs_division='', game_segment='', period='0', shot_clock_range='', last_n_games='0')

Bases: nba_py.player._PlayerDashboard

Tracking data for passing for a given player

Args:

player_id ID of the player to look up
team_id ID of the team to look up
measure_type Specifies type of measure to use (Base, Advanced, etc.)
per_mode Mode to measure statistics (Totals, PerGame, Per36, etc.)
plus_minus Whether or not to consider plus minus (Y or N)
pace_adjust Whether or not to pace adjust stats (Y or N)
rank Whether or not to consider rank (Y or N)
league_id ID for the league to look in (Default is 00)
season Season given to look up
season_type Season type to consider (Regular / Playoffs)

po_round Playoff round outcome Filter out by wins or losses location Filter out by home or away month Specify month to filter by season_segment Filter by pre/post all star break date_from Filter out games before a specific date date_to Filter out games after a specific date opponent_team_id Opponent team ID to look up vs_conference Filter by conference vs_division Filter by division game_segment Filter by half / overtime period Filter by quarter / specific overtime shot_clock_range Filter statistics by range in shot clock last_n_games Filter by number of games specified in N

Attributes:

json Contains the full json dump to play around with

passes_made()

```
passes_received()
```

Bases: nba_py.player._PlayerDashboard

Player stats by different performance metrics such as score differntial, points scored, and points scored against

Args:

player_id ID of the player to look up
team_id ID of the team to look up
measure_type Specifies type of measure to use (Base, Advanced, etc.)
per_mode Mode to measure statistics (Totals, PerGame, Per36, etc.)
plus_minus Whether or not to consider plus minus (Y or N)
pace_adjust Whether or not to pace adjust stats (Y or N)
rank Whether or not to consider rank (Y or N)
league_id ID for the league to look in (Default is 00)
season Season given to look up

season_type Season type to consider (Regular / Playoffs)

po_round Playoff round

outcome Filter out by wins or losses

location Filter out by home or away

month Specify month to filter by

season_segment Filter by pre/post all star break

date_from Filter out games before a specific date

date_to Filter out games after a specific date

opponent_team_id Opponent team ID to look up

vs_conference Filter by conference

vs_division Filter by division

game_segment Filter by half / overtime

period Filter by quarter / specific overtime

shot_clock_range Filter statistics by range in shot clock

last_n_games Filter by number of games specified in N

Attributes:

json Contains the full json dump to play around with

```
points_against()
```

points_scored()

```
score_differential()
```

```
class nba_py.player.PlayerProfile (player_id, per_mode='PerGame', league_id='00')
Bases: nba_py.player.PlayerCareer
```

Contains a more in depth version of player career stats with season highs, career highs, and when the player's next game is

Args:

player_id Player ID to look up

per_mode Mode to measure statistics (Totals, PerGame, Per36, etc.)

league_id ID for the league to look in (Default is 00)

Attributes:

json Contains the full json dump to play around with

career_highs()

next_game()

season_highs()

class nba_py.player.PlayerReboundLogTracking (player_id, team_id=0, measure_type='Base', per mode='PerGame', plus_minus='N', pace adjust='N', rank='N', league id='00', season='2016-17', season_type='Regular Season', po_round='0', outcome='', location='', month='0', season segment='', date from=''. date to=''. opponent team $id=0^{\circ}$, vs_conference='', vs_division='', game_segment='', period='0', shot_clock_range=``, last_n_games=`0`) Bases: nba_py.player._PlayerDashboard

Contains a log for every rebound for a given season for a given player

Args:

player_id ID of the player to look up team id ID of the team to look up measure_type Specifies type of measure to use (Base, Advanced, etc.) per mode Mode to measure statistics (Totals, PerGame, Per36, etc.) **plus minus** Whether or not to consider plus minus (Y or N) **pace_adjust** Whether or not to pace adjust stats (Y or N) rank Whether or not to consider rank (Y or N) **league_id** ID for the league to look in (Default is 00) season Season given to look up season_type Season type to consider (Regular / Playoffs) po_round Playoff round outcome Filter out by wins or losses **location** Filter out by home or away **month** Specify month to filter by season_segment Filter by pre/post all star break date from Filter out games before a specific date date_to Filter out games after a specific date opponent_team_id Opponent team ID to look up vs_conference Filter by conference vs_division Filter by division game_segment Filter by half / overtime period Filter by quarter / specific overtime shot_clock_range Filter statistics by range in shot clock last n games Filter by number of games specified in N

Attributes:

json Contains the full json dump to play around with

class nba_py.player.**PlayerReboundTracking** (*player_id*, team id=0, measure_type='Base', per mode='PerGame', plus_minus='N', pace adjust='N', rank='N', league id='00', season='2016-17', season_type='Regular po round='0', outcome='', Season', location='', month='0',season_segment='', date_from=''. date to="', oppovs_conference='', nent team $id=0^{\circ}$, vs_division='', game_segment='', period='0', shot_clock_range=``, last_n_games=`0`) Bases: nba_py.player._PlayerDashboard

Tracking data for rebounding for a given player

Args:

player_id ID of the player to look up team id ID of the team to look up measure_type Specifies type of measure to use (Base, Advanced, etc.) per mode Mode to measure statistics (Totals, PerGame, Per36, etc.) **plus minus** Whether or not to consider plus minus (Y or N) **pace_adjust** Whether or not to pace adjust stats (Y or N) rank Whether or not to consider rank (Y or N) **league_id** ID for the league to look in (Default is 00) season Season given to look up season_type Season type to consider (Regular / Playoffs) po_round Playoff round outcome Filter out by wins or losses **location** Filter out by home or away **month** Specify month to filter by **season_segment** Filter by pre/post all star break date from Filter out games before a specific date date_to Filter out games after a specific date opponent_team_id Opponent team ID to look up vs_conference Filter by conference vs_division Filter by division game_segment Filter by half / overtime **period** Filter by quarter / specific overtime shot_clock_range Filter statistics by range in shot clock last n games Filter by number of games specified in N **Attributes:**

     Bases: nba_py.player._PlayerDashboard
```

Tracking data for shooting for a given player

Args:

player_id ID of the player to look up team_id ID of the team to look up measure_type Specifies type of measure to use (Base, Advanced, etc.) per_mode Mode to measure statistics (Totals, PerGame, Per36, etc.) **plus minus** Whether or not to consider plus minus (Y or N) pace_adjust Whether or not to pace adjust stats (Y or N) **rank** Whether or not to consider rank (Y or N) league id ID for the league to look in (Default is 00) season Season given to look up **season_type** Season type to consider (Regular / Playoffs) po_round Playoff round outcome Filter out by wins or losses **location** Filter out by home or away **month** Specify month to filter by season_segment Filter by pre/post all star break date_from Filter out games before a specific date date to Filter out games after a specific date opponent_team_id Opponent team ID to look up vs_conference Filter by conference

vs_division Filter by division

game_segment Filter by half / overtime

period Filter by quarter / specific overtime

shot_clock_range Filter statistics by range in shot clock

last_n_games Filter by number of games specified in N

Attributes:

json Contains the full json dump to play around with

```
closest_defender_shooting()
```

```
closest_defender_shooting_long()
```

```
dribble_shooting()
```

general_shooting()

shot_clock_shooting()

touch_time_shooting()

class nba_py.player.PlayerSummary (player_id)
 Contains common player information like headline stats, weight, etc.

Args:

player_id ID of the player to look up

Attributes:

json Contains the full json dump to play around with

headline_stats()

info()

Contains general stats that pertain to players going against other players

Args:

player_id ID of the player to look up

vs_player_id ID of the vs player to look up

team_id ID of the team to look up

measure_type Specifies type of measure to use (Base, Advanced, etc.)

per_mode Mode to measure statistics (Totals, PerGame, Per36, etc.)

plus_minus Whether or not to consider plus minus (Y or N)

pace_adjust Whether or not to pace adjust stats (Y or N)

rank Whether or not to consider rank (Y or N)

league_id ID for the league to look in (Default is 00) season Season given to look up season_type Season type to consider (Regular / Playoffs) po_round Playoff round outcome Filter out by wins or losses **location** Filter out by home or away month Specify month to filter by **season_segment** Filter by pre/post all star break date_from Filter out games before a specific date **date_to** Filter out games after a specific date opponent_team_id Opponent team ID to look up vs_conference Filter by conference vs_division Filter by division game_segment Filter by half / overtime period Filter by quarter / specific overtime shot clock range Filter statistics by range in shot clock last_n_games Filter by number of games specified in N

Attributes: json: Contains the full json dump to play around with

shot_distance_off_court()
```

```
shot_distance_on_court()
```

```
shot_distance_overall()
```

```
vs_player_info()
```

Bases: nba_py.player._PlayerDashboard

Displays player stats over the given season and over all seasons in the given league

```
Args:
```

player_id ID of the player to look up team_id ID of the team to look up measure_type Specifies type of measure to use (Base, Advanced, etc.) per mode Mode to measure statistics (Totals, PerGame, Per36, etc.) **plus minus** Whether or not to consider plus minus (Y or N) pace_adjust Whether or not to pace adjust stats (Y or N) rank Whether or not to consider rank (Y or N) **league_id** ID for the league to look in (Default is 00) season Season given to look up **season_type** Season type to consider (Regular / Playoffs) po_round Playoff round outcome Filter out by wins or losses location Filter out by home or away month Specify month to filter by season segment Filter by pre/post all star break date_from Filter out games before a specific date date_to Filter out games after a specific date opponent_team_id Opponent team ID to look up vs_conference Filter by conference vs_division Filter by division game_segment Filter by half / overtime period Filter by quarter / specific overtime shot clock range Filter statistics by range in shot clock last n games Filter by number of games specified in N

Attributes:

json Contains the full json dump to play around with

by_year()

Calls our PlayerList class to get a full list of players and then returns just an id if specified or the full row of player information

Args:

first_name First name of the player

last_name Last name of the player

(this is None if the player only has first name [Nene]) :only_current: Only wants the current list of players :just_id: Only wants the id of the player

Returns: Either the ID or full row of information of the player inputted

Raises: :PlayerNotFoundException:
